

Maximo Accelerator for Manufacturing

By better predicting and preventing asset failure, you will avoid costly and unplanned plant downtime.

Advancing Asset Management in the Manufacturing Industry

Whether you are manufacturing food and beverage products, mining and metals, or chemicals, BPD Zenith's Maximo for Manufacturing Accelerator model serves all aspects of the sector. Together, we are building a powerful network of companies committed to advancing asset management in the manufacturing industry.

Keep Production Running

Manufacturers depend on physical assets, from fleet vehicles to production facilities, to produce and deliver high quality goods and services to their customers. Each of these complex assets must be tracked, controlled and maintained to maximize production, reduce maintenance costs and improve reliability.

Benefit from Experience

Built on IBM® Maximo® software, BPD's solution provides a best-in-class Enterprise Asset Management (EAM) System. It embodies proven business processes and industry configurations to streamline Maximo implementation for quicker Return on Investment. For 26 years, BPD has been helping manufacturing companies address their asset management challenges. With Maximo for Manufacturing, you can:

- Extend the useful life of assets through better maintenance processes, in turn deferring new purchases and preserving capital;
- Reduce operating costs – streamline operations, reduce labour costs, remove excess and obsolete inventory spares, and consolidate key systems;
- Eliminate recurring failures and reduce changeover times to increase operational effectiveness;

- Support regulatory compliance, traceability, governance and reporting;
- Support RCM, TPM and GMP as well as alignment to PAS 55 and ISO 55000.

Operational Insights from Connected Assets

Manufacturers rely on data to help them deal with the complexity caused by global operations, value chains and market. By integrating and analyzing data generated from your equipment and IoT sensors, operational improvements can be made across plants.

Asset Health Dashboards can provide visibility of real-time availability and reliability of your machines and equipment. By employing algorithms and machine learning to this data, you can take action from real-time insights, identifying early failures and optimizing asset performance.

Improve Supply Chain Efficiency

Managing the many moving parts of the supply chain process is difficult, but crucial to the success of your operations. BPD's Supply Chain Management process includes Materials Replenishment (Purchasing), Issuing Materials, and Materials Receiving. Additionally, we've captured the PM definition and review as a predecessor and continuous improvement process corresponding to the PM process.

Manage your Business Risk

Risk management is addressed by ensuring all work orders can be assessed on a combination of the risk likelihood and the severity. Once chosen, Maximo will determine a priority and set the timescales for the maintenance work.

Work Smarter with new levels of usability, connectivity and insight

With role-based access and process automation, Maximo for Manufacturing Accelerator delivers critical information to the right people at the right time, so you can make informed decisions faster. Preconfigured to the needs of manufacturers, these standardized configurations include:

- ✓ Configurable Security Groups and Roles
- ✓ Comprehensive Classifications for Assets, Items and Locations
- ✓ Workforce identification (including Labour Craft Codes)
- ✓ Hierarchical Failure Identification
- ✓ International Standard Units of Measure

Maximo on the Move

Maximo Anywhere applications puts the power of Maximo for Manufacturing on your mobile device – in both connected and disconnected mode. Engineers, field technicians and asset managers can complete tasks and view up-to-date information where they need it. Your field service team can create Service Requests to report issues quickly, with the ability to attach photos from their tablet or smartphone. This makes them dramatically more responsive and efficient.

Building for the Future

BPD Zenith is committed to continuously improving the solutions we provide. By using Maximo for Manufacturing, you will become part of a mature and extensive global community, benefitting from support and improvements developed for our Clients across the industry. IBM provides solutions for more than 1000 major Manufacturing organizations worldwide.

Flexible Delivery with BPD Zenith

Our portfolio is flexible so you can access the Maximo for Manufacturing Accelerator solution in the way that best suits your business – whether that is On Premise, Hosted, or via Software-as-a-Service.

Our MaxiCloud SaaS offering has never been simpler. We provide a low cost, scalable solution that can fit your business needs, enabling you to log in anytime, anywhere to view your maintenance system quickly and easily. Pay for what you need, when you need it, and let us handle the rest.
